EDUCATION

Seoul National University, Korea

- Ph.D., Computer Science and Engineering Mar. 2014 – Feb. 2020
(Advisor: Professor Sun Kim)
- B. S., Computer Science and Engineering (*Summa Cum Laude*) Mar. 2010 – Aug. 2013

EXPERIENCE

Seoul National University, Korea

- Postdoctoral research fellow,
SNU BK21 FOUR Intelligence Computing Dec. 2020 – Present
(Advisor: Professor Sun Kim)
- Postdoctoral research fellow, SNU Bioinformatics Institute Mar. 2020 – Nov. 2020
(Advisor: Professor Sun Kim)

RESEARCH INTERESTS

My general research area is applied machine learning & deep learning for interpretation of biological systems. Focuses on modeling interactions between biological elements of living organisms from DNA sequences to gene expression or epigenomes. Applications include subpath mining, sequence similarity measurement, interpretable deep learning model, and computational biology with multi-omics analysis.

RESEARCH EXPERIENCE

Graduate research in Bio & Health Informatics Lab, Seoul National University, Korea

< Deep Learning models for interpreting biological data with prior knowledge >

- Cancer subtype classification and modeling by pathway attention and propagation
 - Designing a pathway-based explainable deep learning model by graph convolutional network and attention mechanism
 - Predicting cancer subtypes using gene expression data and pathway information
 - Identifying subtype related transcription factors using network propagation algorithm
 - Analyzed RNA-seq dataset of five cancers with multiple subtypes
 - Paper accepted by *Bioinformatics* journal (SCI, IF=5.610)

- Learning Cell-Type-Specific Gene Regulation Mechanisms by Multi-Attention Based Deep Learning with Regulatory Latent Space
 - Designing multi-modal deep learning model for learning gene regulation mechanism
 - Exploring properties of each omics by different neural network structures (ex. CNN, RNN)
 - Elucidating epigenetic gene regulation mechanism by various attention layers
 - Paper accepted by *Frontiers in Genetics* journal (SCIE, IF=3.260)
- Deep Hierarchical Embedding for Simultaneous Modeling of GPCR Proteins in a Unified Metric Space
 - Learning hierarchy in GPCR proteins using a multi-task convolutional neural network
 - Utilizing two types of loss: softmax-loss (for inter-class) & center-loss (for intra-class)
 - Encapsulating biological properties (ex. Phylogeny, Motif) in embedded hidden features
 - Paper submitted in *Scientific Reports* journal (In revision)

< Pathway analysis for high-dimension & small sample-size data >

- Comprehensive and critical evaluation of individualized pathway activity measurement tools on pan-cancer data
 - Suggesting five criteria for measuring usefulness of pathway activity inference tools
 - Analyzed 13 pathway activity inference tools on PAN-cancer data
 - Paper accepted by *Briefings in Bioinformatics* journal (SCI, IF=8.990)
- MIDAS: Mining differentially activated subpaths of KEGG pathways from multi-class RNA-seq data
 - Kinds of subgraph mining for identifying differentially activated subpaths among multi-class data
 - Handling multi-class data by statistical test & greedy-based expansion technique
 - Paper accepted by *Methods* journal (SCI, IF=3.812)

< Information theoretic approach in sequence-type data >

- Ranked k-spectrum kernel for comparative and evolutionary comparison of exons, introns, and CpG islands
 - Suggesting a sequence similarity kernel based on rank and evolutionary information
 - Reconstructing phylogenetic trees of 10 mammalian species using exon, intron, and CpG islands sequences
 - Finding relationship across three regions in terms of evolutionary information contents: exon > CpG island > intron
 - Paper accepted by *IEEE/ACM Transactions on Computational Biology and Bioinformatics* journal (SCIE, IF=3.015)
- SpliceHetero: An information theoretic approach for measuring spliceomic intratumor heterogeneity from bulk tumor RNA-seq
 - Measuring intratumor heterogeneity in transcriptome level by handling spliceome
 - Utilizing Shannon entropy and Jensen-Shannon Divergence to capture heterogeneity
 - Paper accepted by *PloS ONE* journal (SCI, IF=2.740)

< Application of computational algorithms on epigenomic data >

- DNMT1 maintains metabolic fitness of adipocytes through acting as an epigenetic safeguard of mitochondrial dynamics
 - Showing that DNA methylation directs distal enhancer-mediated transcriptomic features of

- adipocytes
 - Using a sliding-window based DMR (Differentially Methylated Region) detecting algorithm and a combinatorial analysis of ChIP-seq and PCHi-C data
 - Paper accepted by *Proceedings of the National Academy of Sciences (PNAS)* journal (SCI, IF=9.412)
- BioVLAB-mCpG-SNP-EXPRESS: A system for multi-level and multi-perspective analysis and exploration of DNA methylation, sequence variation (SNPs), and gene expression from multi-omics data
 - Platform for analyzing complex relationships between omics data
 - Guiding interpretation of results by multi-level and multi-perspective panels
 - Paper accepted by *Methods* journal (SCIE, IF=3.812)
- PRISM: Methylation Pattern-based, Reference-free Inference of Subclonal Makeup
 - Inferring the composition of epigenetically distinct subclones of a tumor from methylation patterns
 - Proofreading of methylation pattern based on DNMT1-like HMM
 - Inferring epigenetic subclonal information by k-mixture decomposition with EM algorithm
 - Paper accepted by *ISMB 2019* conference, *Bioinformatics* journal (SCI, IF=5.610)

TEACHING EXPERIENCE

Guest lecturer: Machine Learning in Bioinformatics, 2021 Spring, Seoul National University, Korea

Guest lecturer: 생물정보학을 위한 IT기초, 2020 Spring, Seoul National University, Korea

Guest lecturer: 휴먼바이오공학기초, 2020 Spring, Ewha Womans University, Korea

Guest lecturer: 기계학습의 이해, 2019 Oct, Big Data Academy, Seoul National University, Korea

Guest lecturer: 휴먼바이오공학기초, 2019 Spring, Ewha Womans University, Korea

Guest lecturer: 기계학습의 이해, 2018 Jul, Big Data Academy, Seoul National University, Korea

Guest lecturer: Deep Learning for Bioinformatics, 2018 Feb, KSBi-BIML 2018 (생물정보학&머신러닝/인공지능 워크샵), Korea

PUBLICATIONS

Research Highlights

5 papers published as Deep Learning in Bioinformatics (국제 3편, 국내 2편)

2 papers published in *Bioinformatics* (The flagship journal in the bioinformatics field)

1 paper presented at *Intelligent Systems for Molecular Biology (ISMB)* (한국정보과학회 선정 최우수 학술대회)

International Journal (*: equal contributors)

[1] Sung I*, Lee S*, Pak M, Shin Y, Kim S. AutoCoV: Learning the Spatial and Temporal Dynamics of COVID-19 Spread Patterns from Embedding Space by k-mer Based Deep Learning. *International Conference on Intelligent Biology and Medicine (ICIBM 2021)*, Under review.

[2] Lee T, Lee S, Kang M, Sun Kim. Deep Hierarchical Embedding for Simultaneous Modeling of GPCR Proteins in a Unified Metric Space. *Scientific Reports*, In revision.
