EDUCATION

Seoul National University, Korea

- Ph.D., Computer Science and Engineering Mar. 2014 – Feb. 2020
(Advisor: Professor Sun Kim)
- B. S., Computer Science and Engineering (*Summa Cum Laude*) Mar. 2010 – Aug. 2013

EXPERIENCE

Seoul National University, Korea

- Postdoctoral research fellow,
SNU Institute of Computer Technology Sep. 2021 – Present
(Advisor: Professor Sun Kim)
- Postdoctoral research fellow,
SNU BK21 FOUR Intelligence Computing Dec. 2020 – Aug. 2021
(Advisor: Professor Sun Kim)
- Postdoctoral research fellow, SNU Bioinformatics Institute Mar. 2020 – Nov. 2020
(Advisor: Professor Sun Kim)

RESEARCH INTERESTS

Artificial Intelligence (AI), Machine learning, and data mining techniques

Integration of BT and IT (Bioinformatics) for biomedical big data, especially graph & network analysis

Cheminformatics and AI in Drug discovery

My research area focuses on developing deep learning/machine learning models for analyzing graph-structured data and multi-omics data in the biomedical and chemical informatics fields. Focuses on modeling interactions between biological elements of living organisms as form of a graph, or on modeling molecular graphs incorporating subgraphs and 3D information. Applications include interpretable deep learning model for bioinformatics, computational biology with multi-omics analysis, subpath mining in the biological network, molecular property prediction, and drug response prediction.

RESEARCH EXPERIENCE

Graduate research in Bio & Health Informatics Lab, Seoul National University, Korea

< Deep Learning models for interpreting biological data with prior knowledge >

- Cancer subtype classification and modeling by pathway attention and propagation
 - Designing a pathway-based explainable deep learning model by graph convolutional network and attention mechanism
 - Predicting cancer subtypes using gene expression data and pathway information
 - Paper accepted by *Bioinformatics* journal (SCIE, IF=5.610)

- Learning Cell-Type-Specific Gene Regulation Mechanisms by Multi-Attention Based Deep Learning with Regulatory Latent Space
 - Designing multi-modal deep learning model for learning gene regulation mechanism
 - Elucidating epigenetic gene regulation mechanism by various attention layers
 - Paper accepted by *Frontiers in Genetics* journal (SCIE, IF=3.260)
- Multi-layered Knowledge Graph Neural Network Reveals Pathway-level Agreement of Three Breast Cancer Multi-gene Assays
 - Designing an explainable deep learning model by integrating intra- and inter- pathway level attention
 - Identification of shared regulatory mechanisms of three breast cancer multi-gene assays
 - Under review in SCIE journal

< AI with graph structured data in biomedical domains >

- Sparse Structure Learning via Graph Neural Networks for Inductive Document Classification
 - A novel GNN-based sparse structure learning model for inductive document classification
 - Employing structure learning to sparsely select edges between words by considering dynamic contextual dependencies
 - Paper accepted by *AAAI 2022*
- Biomedical knowledge graph learning for drug repurposing by extending guilt-by-association to multiple layers
 - A semantic multi-layer guilt-by-association approach that leverages the principle of guilt-by-association - "similar genes share similar functions" at the drug-gene-disease level
 - Designing a semantic information-guided random walk to generate embeddings of drugs and disease in a unified embedding space
 - Paper accepted by *Nature Communications journal* (SCIE, IF=16.6)

< Cheminformatics and AI in Drug discovery >

- Multi-Task Informed Learnable Prototypes on Few Shot learning for Molecular Property Prediction
 - Leveraging shared knowledge across multiple molecular properties in few-shot learning
 - Incorporating a stochastic attention mechanisms to reflect information from multiple assays
 - Under review in International Conference
- Dual Representation Learning for Predicting Drug-side Effect Frequency using Protein Target Information
 - Utilizing heterogenous features of drugs and side effects to get improved latent representations
 - Compensating for the drugs without clear target proteins using the Adaboost method
 - Paper accepted by *IEEE Journal of Biomedical and Health Informatics* journal (SCIE, IF=7.7)
- Improved drug response prediction by drug target data integration via network-based profiling
 - A novel model-agnostic framework to enhance performances of existing deep learning models for drug response prediction
 - Network-based estimation of gene perturbation by drug treatment
 - Paper accepted by *Briefings in Bioinformatics* journal (SCI, IF=9.5)
